

GRIDS: Interactive Layout Design with Integer Programming

Year: 2020 **Source:** docs/REFERENCES.md verified bibliography

Question	One-page summary
What it studies	Models layout as an optimization problem with packing, alignment, grouping, and positioning objectives.
What slidekit uses	Backs slidekit alignment and balance as explicit geometric constraints.
YAML vs HTML implication	HTML/CSS has mature layout engines; YAML plus a deterministic solver makes objectives inspectable and testable.
Executive takeaway	Use research-style HTML/rendered evaluation when pixel fidelity is the object of study; use slidekit YAML when the production goal is auditable, schema-valid, deterministic deck generation.
