

Ngo, Teo & Byrne: Modelling Interface Aesthetics

Year: 2003 **Source:** docs/REFERENCES.md verified bibliography

Question	One-page summary
What it studies	Defines closed-form aesthetics measures such as balance, equilibrium, symmetry, density, regularity, and order/complexity.
What slidekit uses	Primary basis for bounding-box aesthetics over ResolvedDeck geometry.
YAML vs HTML implication	YAML retains semantic elements and bounding boxes; rendered HTML may lose semantic intent unless instrumented.
Executive takeaway	Use research-style HTML/rendered evaluation when pixel fidelity is the object of study; use slidekit YAML when the production goal is auditable, schema-valid, deterministic deck generation.
