

Seeing Like a Designer Without One: Unsupervised Slide Quality Assessment via Designer Cue Augmentation

Year: 2025 **Source:** docs/REFERENCES.md verified bibliography

Question	One-page summary
What it studies	Uses visual-design cues such as whitespace, colorfulness, edge density, brightness contrast, text density, color harmony, and layout balance.
What slidekit uses	Slidekit can compute geometry/theme subsets while deliberately omitting pixel-only cues without rendering.
YAML vs HTML implication	HTML/pixels capture edge density and brightness; YAML captures whitespace, density, color roles, and layout balance deterministically.
Executive takeaway	Use research-style HTML/rendered evaluation when pixel fidelity is the object of study; use slidekit YAML when the production goal is auditable, schema-valid, deterministic deck generation.
