

Constrained Graphic Layout Generation via Latent Optimization

Year: 2021 **Source:** docs/REFERENCES.md verified bibliography

Question	One-page summary
What it studies	Defines alignment and overlap metrics over element bounding boxes.
What slidekit uses	Canonical support for slidekit alignment/non-overlap scores and E_OVERLAP linting.
YAML vs HTML implication	YAML bounding boxes make overlap checks cheap and exact; HTML requires DOM or screenshot measurement with environment risk.
Executive takeaway	Use research-style HTML/rendered evaluation when pixel fidelity is the object of study; use slidekit YAML when the production goal is auditable, schema-valid, deterministic deck generation.
