

Miniukovich & De Angeli: Computation of Interface Aesthetics

Year: 2015 **Source:** docs/REFERENCES.md verified bibliography

Question	One-page summary
What it studies	Defines GUI metrics across information amount, organization, and discriminability, including clutter, color variability, symmetry, grid, and contrast.
What slidekit uses	Supports balance/alignment, richness/color variety, and density scoring; pixel-only contour metrics stay out of scope.
YAML vs HTML implication	HTML can compute more visual statistics; YAML is lighter, safer, and better aligned with slidekit no-render verification.
Executive takeaway	Use research-style HTML/rendered evaluation when pixel fidelity is the object of study; use slidekit YAML when the production goal is auditable, schema-valid, deterministic deck generation.
