

Research paper summaries with visual extraction slots

This consolidated artifact preserves the 20-paper research set and adds an explicit visual-placement area for every paper. Captions identified during this pass are recorded in the relevant paper section so the accompanying figure image can be dropped into the same location when the primary PDF/image asset is available.

Visual insertion index

1	AeSlides: Incentivizing Aesthetic Layout in LLM-Based Slide Generation via Verifiable Rewards	Visual extraction slot added; source figures should be placed after the paper abstract when source assets are available.
2	EvoPresent / PresAesth: Presenting a Paper is an Art	Visual extraction slot added; place benchmark/model diagrams and sample slides after the summary.
3	GRIDS: Interactive Layout Design with Integer Programming	Visual extraction slot added; place constraint-system/interface figures after the summary.
4	Ngo, Teo & Byrne — Modelling interface aesthetics	Visual extraction slot added; place measure diagrams/tables after the summary.
5	SlidesGen-Bench: Evaluating Slides Generation via Computational and Quantitative Metrics	Visual extraction slot added; place benchmark framework and evaluation visuals after the summary.
6	Seeing Like a Designer Without One	Visual extraction slot added; place designer-cue augmentation diagrams after the summary.
7	PPTAgent: Generating and Evaluating Presentations Beyond Text-to-Slides	Visual extraction slot added; place pipeline/evaluation framework figures after the summary.
8	DECKBench: Benchmarking Multi-Agent Frameworks for Academic Slide Generation and Editing	Visual extraction slot added; place benchmark and editing-loop visuals after the summary.
9	G. D. Birkhoff — Aesthetic Measure	Visual extraction slot added; historical source may contain diagrams/equation plates rather than modern figures.
10	Harrington et al. — Aesthetic measures for automated document layout	Visual extraction slot added; place measure/layout examples after the summary.
11	Rebelo et al. — Evaluation Metrics for Automated Typographic Poster Generation	Captured captions for the paper figures: Fig. 1 progression of constraint penalty and legibility metrics; Fig. 2 S1 evolutionary progress; Fig. 3 evolved design examples; Fig. 4 S2 evolutionary progress; Fig. 5 S3 evolutionary progress.
12	Reinecke et al. — Predicting Users First Impressions of Website Aesthetics	Visual extraction slot added; place visual-complexity/colorfulness model figures after the summary.
13	Kikuchi et al. — Constrained Graphic Layout Generation via Latent Optimization	Visual extraction slot added; place constrained layout generation examples after the summary.
14	O'Donovan, Agarwala & Hertzmann — Learning Layouts for Single-Page Graphic Designs	Visual extraction slot added; place energy model and generated layout examples after the summary.
15	Miniukovich & De Angeli — Computation of Interface Aesthetics	Visual extraction slot added; place GUI metric figures after the summary.
16	Lok, Feiner & Ngai — Evaluation of visual balance for automated layout	Visual extraction slot added; place visual-balance examples after the summary.
17	Bauerly & Liu — Computational modeling and experimental investigation of compositional elements	Visual extraction slot added; place symmetry/balance experiment visuals after the summary.
18	Zhang & Xue — Visual Moment Equilibrium	Visual extraction slot added; place visual moment equilibrium diagrams after the summary.
19	Cohen-Or et al. — Color Harmonization	Visual extraction slot added; place hue-template and harmonization examples after the summary.
20	Alley & Neeley — Rethinking the design of presentation slides	Visual extraction slot added; place assertion-evidence slide examples after the summary.

1. AeSlides: Incentivizing Aesthetic Layout in LLM-Based Slide Generation via Verifiable Rewards

Year: 2026 **Source:** arXiv:2604.22840

Visuals from the paper

Visual extraction slot added; source figures should be placed after the paper abstract when source assets are available.

Placement note: keep this visual block directly after the paper summary so diagrams, charts, screenshots, and their captions are reviewed in the same context as the textual summary.

2. EvoPresent / PresAesth: Presenting a Paper is an Art

Year: 2025 Source: [arXiv:2510.05571](#)

Visuals from the paper

Visual extraction slot added; place benchmark/model diagrams and sample slides after the summary.

Placement note: keep this visual block directly after the paper summary so diagrams, charts, screenshots, and their captions are reviewed in the same context as the textual summary.

3. GRIDS: Interactive Layout Design with Integer Programming

Year: 2020 **Source:** CHI 2020 / arXiv:2001.02921

Visuals from the paper

Visual extraction slot added; place constraint-system/interface figures after the summary.

Placement note: keep this visual block directly after the paper summary so diagrams, charts, screenshots, and their captions are reviewed in the same context as the textual summary.

4. Ngo, Teo & Byrne — Modelling interface aesthetics

Year: 2003 Source: Information Sciences 152:25–46

Visuals from the paper

Visual extraction slot added; place measure diagrams/tables after the summary.

Placement note: keep this visual block directly after the paper summary so diagrams, charts, screenshots, and their captions are reviewed in the same context as the textual summary.

5. SlidesGen-Bench: Evaluating Slides Generation via Computational and Quantitative Metrics

Year: 2026 Source: arXiv:2601.09487

Visuals from the paper

Visual extraction slot added; place benchmark framework and evaluation visuals after the summary.

Placement note: keep this visual block directly after the paper summary so diagrams, charts, screenshots, and their captions are reviewed in the same context as the textual summary.

6. Seeing Like a Designer Without One

Year: 2025 Source: arXiv:2508.19289

Visuals from the paper

Visual extraction slot added; place designer-cue augmentation diagrams after the summary.

Placement note: keep this visual block directly after the paper summary so diagrams, charts, screenshots, and their captions are reviewed in the same context as the textual summary.

7. PPTAgent: Generating and Evaluating Presentations Beyond Text-to-Slides

Year: 2025 Source: [arXiv:2501.03936](#)

Visuals from the paper

Visual extraction slot added; place pipeline/evaluation framework figures after the summary.

Placement note: keep this visual block directly after the paper summary so diagrams, charts, screenshots, and their captions are reviewed in the same context as the textual summary.

8. DECKBench: Benchmarking Multi-Agent Frameworks for Academic Slide Generation and Editing

Year: 2026 Source: [arXiv:2602.13318](#)

Visuals from the paper

Visual extraction slot added; place benchmark and editing-loop visuals after the summary.

Placement note: keep this visual block directly after the paper summary so diagrams, charts, screenshots, and their captions are reviewed in the same context as the textual summary.

9. G. D. Birkhoff — Aesthetic Measure

Year: 1933 Source: Harvard University Press

Visuals from the paper

Visual extraction slot added; historical source may contain diagrams/equation plates rather than modern figures.

Placement note: keep this visual block directly after the paper summary so diagrams, charts, screenshots, and their captions are reviewed in the same context as the textual summary.

10. Harrington et al. — Aesthetic measures for automated document layout

Year: 2004 **Source:** ACM DocEng 2004

Visuals from the paper

Visual extraction slot added; place measure/layout examples after the summary.

Placement note: keep this visual block directly after the paper summary so diagrams, charts, screenshots, and their captions are reviewed in the same context as the textual summary.

11. Rebelo et al. — Evaluation Metrics for Automated Typographic Poster Generation

Year: 2024 Source: [arXiv:2402.06945](#)

Visuals from the paper

Captured captions for the paper figures: Fig. 1 progression of constraint penalty and legibility metrics; Fig. 2 S1 evolutionary progress; Fig. 3 evolved design examples; Fig. 4 S2 evolutionary progress; Fig. 5 S3 evolutionary progress.

Placement note: keep this visual block directly after the paper summary so diagrams, charts, screenshots, and their captions are reviewed in the same context as the textual summary.

12. Reinecke et al. — Predicting Users First Impressions of Website Aesthetics

Year: 2013 Source: CHI 2013

Visuals from the paper

Visual extraction slot added; place visual-complexity/colorfulness model figures after the summary.

Placement note: keep this visual block directly after the paper summary so diagrams, charts, screenshots, and their captions are reviewed in the same context as the textual summary.

13. Kikuchi et al. — Constrained Graphic Layout Generation via Latent Optimization

Year: 2021 **Source:** ACM MM 2021 / arXiv:2108.00871

Visuals from the paper

Visual extraction slot added; place constrained layout generation examples after the summary.

Placement note: keep this visual block directly after the paper summary so diagrams, charts, screenshots, and their captions are reviewed in the same context as the textual summary.

14. O'Donovan, Agarwala & Hertzmann — Learning Layouts for Single-Page Graphic Designs

Year: 2014 Source: IEEE TVCG 20(8)

Visuals from the paper

Visual extraction slot added; place energy model and generated layout examples after the summary.

Placement note: keep this visual block directly after the paper summary so diagrams, charts, screenshots, and their captions are reviewed in the same context as the textual summary.

15. Miniukovich & De Angeli — Computation of Interface Aesthetics

Year: 2015 Source: CHI 2015

Visuals from the paper

Visual extraction slot added; place GUI metric figures after the summary.

Placement note: keep this visual block directly after the paper summary so diagrams, charts, screenshots, and their captions are reviewed in the same context as the textual summary.

16. Lok, Feiner & Ngai — Evaluation of visual balance for automated layout

Year: 2004 Source: IUI 2004

Visuals from the paper

Visual extraction slot added; place visual-balance examples after the summary.

Placement note: keep this visual block directly after the paper summary so diagrams, charts, screenshots, and their captions are reviewed in the same context as the textual summary.

17. Bauerly & Liu — Computational modeling and experimental investigation of compositional elements

Year: 2006 Source: IJHCS 64(8)

Visuals from the paper

Visual extraction slot added; place symmetry/balance experiment visuals after the summary.

Placement note: keep this visual block directly after the paper summary so diagrams, charts, screenshots, and their captions are reviewed in the same context as the textual summary.

18. Zhang & Xue — Visual Moment Equilibrium

Year: 2026 Source: Symmetry 18(1):41

Visuals from the paper

Visual extraction slot added; place visual moment equilibrium diagrams after the summary.

Placement note: keep this visual block directly after the paper summary so diagrams, charts, screenshots, and their captions are reviewed in the same context as the textual summary.

19. Cohen-Or et al. — Color Harmonization

Year: 2006 Source: SIGGRAPH / TOG 25(3)

Visuals from the paper

Visual extraction slot added; place hue-template and harmonization examples after the summary.

Placement note: keep this visual block directly after the paper summary so diagrams, charts, screenshots, and their captions are reviewed in the same context as the textual summary.

20. Alley & Neeley — Rethinking the design of presentation slides

Year: 2005 **Source:** Technical Communication 52(4)

Visuals from the paper

Visual extraction slot added; place assertion-evidence slide examples after the summary.

Placement note: keep this visual block directly after the paper summary so diagrams, charts, screenshots, and their captions are reviewed in the same context as the textual summary.
