

EvoPresent / PresAesth: Self-Improvement Aesthetic Agents for Academic Presentations

Year: 2025 **Source:** docs/REFERENCES.md verified bibliography

Question	One-page summary
What it studies	Uses self-improving aesthetic agents and human preference data for academic presentations.
What slidekit uses	Informs future calibration of slidekit score weights against labelled slide pairs.
YAML vs HTML implication	HTML supports rich generated artifacts for model training; YAML gives controlled schema and smaller edit surfaces for production generation.
Executive takeaway	Use research-style HTML/rendered evaluation when pixel fidelity is the object of study; use slidekit YAML when the production goal is auditable, schema-valid, deterministic deck generation.
