

DECKBench: Benchmarking Multi-Agent Frameworks for Academic Slide Generation and Editing

Year: 2026 **Source:** docs/REFERENCES.md verified bibliography

Question	One-page summary
What it studies	Assesses slide-level and deck-level fidelity, coherence, layout quality, and editing behavior.
What slidekit uses	Reinforces both slide-level and deck-level checks in slidekit.
YAML vs HTML implication	HTML is natural for external visual QA; YAML is better for multi-agent handoff because schema-bound edits are diffable.
Executive takeaway	Use research-style HTML/rendered evaluation when pixel fidelity is the object of study; use slidekit YAML when the production goal is auditable, schema-valid, deterministic deck generation.
