

Predicting First Impressions with Visual Complexity and Colorfulness

Year: 2013 **Source:** docs/REFERENCES.md verified bibliography

Question	One-page summary
What it studies	Models perceived visual complexity and colorfulness from image statistics.
What slidekit uses	Informs slidekit richness and restrained color-variety scoring as no-render proxies.
YAML vs HTML implication	HTML screenshots can estimate colorfulness directly; YAML/theme analysis can keep color use intentional and accessible.
Executive takeaway	Use research-style HTML/rendered evaluation when pixel fidelity is the object of study; use slidekit YAML when the production goal is auditable, schema-valid, deterministic deck generation.
